This website focuses primarily on privacy laws and informing users how to control their information. Concerning the consumer, it highlights the impact of the individual user within a corporate breach and how to protect your data. In comparison, researchers have a few resources available, such as the chronological timeline of data breaches, a database of data brokers, and generalized data breach reports. The timeline is an interactive way to view the overall impact of data breaches shown on a U.S. map, graphs, and numbers. The data breaches are sorted based on the organization's type, and subsequent graphs provide insight into security trends. The database of data brokers provides companies that are crucial to protecting being prime targets for data breaches. Researchers can use this information to identify trends and high-risk organizations and analyze past threat vectors.
