

In this picture, the user is working on a repository they are in charge of maintaining. Instead of working in a typical office environment the user decided to go on top of a parking structure. This is done because if the user gets mad they can either yell or throw the laptop off the top in frustration.

In this case, the user is working at a help desk. However, due to separation of duties, and the help desk being at a lower ring of authentication in an enterprise environment this is a typical quote from throughout the day. I also found it funny how the user was a dog highlighting how some people can have imposter syndrome while working within IT.

This is a meeting after more than 30% of the finance or security team fail the phishing email: they clicked on the link of a phishing test. Now it is time for an internal review and new training regimens.

These memes connect to human-centric cybersecurity by highlighting various social practices. They address themes such as individual emotions, imposter syndrome, and phishing tactics, while still linking to the IT and cybersecurity realm. This includes situations like frustration with a computer, experiences in a security operations center, and participating in cybersecurity training sessions.
